1.Created 5 classes WebDriverLaunch,Login,AdminPage,UserPage and BaseTest .

2.WebDriverLaunch class is used for setting the precondition and initializing the browser.

3.Login class is used to login the site as an admin.

4.AdminPage class is used for modifying a category and also one method for database validation are created to get the value of the given column.

5.UserPage class is used to verify the presence of modified category name on the user page.

5.BaseTest class extend the WebDriverLaunch class and is the base class from where all the actions of each classes are controlled by creating objects of each classes and also database validations are being performed by using assertions .
